CONFIDENTIAL

LECIPM

AI-Powered Real Estate Operating System

From listings to intelligent transactions

PROBLEM

The stack stopped at listings

- Passive directories → brokers lose leads after the click
- No unified intelligence across CRM, deals, and marketplace
- Deal success depends on individual habit — not system leverage
- Regulators expect auditability — spreadsheets don’t scale

MARKET GAP

Distribution ≠ execution

- Syndication (e.g. Centris) delivers reach
- Legacy CRM stores data — limited optimization
- Missing layer: intelligence, conversion discipline, workflow depth

SOLUTION

One operating layer

- Captures & attributes leads end-to-end
- Analyzes deals — scores, risk, next steps (assistive)
- Guides brokers — AI suggests; humans choose outreach
- Learns from outcomes — better defaults over time

PRODUCT

System overview

Lead funnel → Deal intelligence → Broker assistant → Compliance → Learning & marketplace

Assistive AI · OACIQ / Law 25–aligned surfaces · Humans accountable

HOW IT WORKS

From syndication to closed deal

Centris → LECIPM → AI → Broker → Closed deal

LECIPM complements syndication · Partner data only as permitted by contract

DIFFERENTIATION

Not search alone · not CRM alone

- Operating system for real estate workflows
- Learning + marketplace signals embedded
- Compliance-aware by design (Québec)

BUSINESS MODEL

Revenue architecture

- Broker subscriptions
- Premium AI & exports
- Investor / analytics surfaces
- Transaction-aligned fees (where permitted)

TRACTION

Proof points

[#]
Leads captured

[#]
Brokers

[#]
Deals tracked

Replace [#] with audited figures before external distribution.

MOAT

Why this compounds

- Integrated graph — leads ↔ deals ↔ listings ↔ events
- Self-improving signals — bounded, review-friendly
- Workflow depth — daily broker use
- Trust — compliance & insurance alignment

VISION

Intelligence layer for transactions

- Depth in priority markets first
- Assistive AI scales; licensees decide
- Expand where product + regulation align

ASK

The round

- Raising: $[___] · [stage]
- Use of funds: Product · GTM · Hiring
- Milestones: [insert measurable targets]

Building the default OS for transaction intelligence in real estate.
